Overview

In May 2025, a severe windstorm damaged the roof and fascia metal of a private residence in Easton, Pennsylvania. High winds loosened and removed shingles, exposing the home to further weather-related risks. ATI Restoration was contacted to quickly stabilize the structure and restore the exterior. The homeowner required a fast turnaround with minimal disruption while maintaining high standards of workmanship and communication.

Project Challenges

Weather conditions created immediate risk, as heavy rain occurred on the first day of work, requiring rapid stabilization to prevent water intrusion. The scope required coordination of multiple exterior components, including roofing, fascia, soffit, and gutters, within a compressed timeline. Material availability added complexity when the homeowner requested a specific shingle that could not be sourced quickly. Throughout the project, ATI balanced urgency, safety, and aesthetic expectations while working on an occupied residential property.

ATI Solutions

ATI mobilized quickly, deploying a five-person roofing crew and an edging technician to stabilize and restore the home. Crews installed tarping during active rainfall and replaced damaged plywood sheathing to ensure structural integrity.

ATI coordinated debris removal with a 20-yard dumpster and utilized specialty equipment, including a siding brake, to fabricate precise fascia components. When the originally requested shingle was unavailable, ATI sourced a nearly identical alternative that met both timeline and appearance requirements. Clear communication and coordinated execution ensured quality results without delays.

Results

The project was completed on schedule in two days, with the home fully restored by May 19, 2025. ATI's rapid response minimized additional weather exposure and helped prevent further damage. The homeowner expressed high satisfaction with the quality of workmanship, clear communication, and overall results. All work was completed with zero safety incidents, and the restored exterior drew positive attention from neighbors, leading to referrals within the community.
